TRENCHERS

Vermeer

TABLE OF CONTENTS

THE TRENCHER **ADVANTAGE**

Vermeer Corporation has a rich history in the trenching industry. In 1956, Vermeer introduced the self-propelled Pow-R-Ditcher trencher, designed to help farmers drain fields. Vermeer trenchers grew beyond the farm in the 1960s. To support suburban growth in the U.S., Vermeer introduced a full line of rubber-tire and track trenchers to efficiently place utilities like electricity, water and sewer underground using open-cut methods. Suburban sprawl was underway.

In the 1980s, Vermeer introduced bigger, tougher and more powerful trenchers to take on jobs in places and ground conditions no one thought possible. Builders could now efficiently construct an underground pipeline network connecting energy sources to markets around the world. The pipeline market took off with Vermeer trenchers leading the charge.

Today, Vermeer has expanded to become a market leader in the trenching industry, supporting customers all over the world. A complete range of machines gives operators the power to dig trenches up to 4 ft (1.2 m) wide, or to depths as deep as 18 ft (5.5 m) below ground. That's why the underground industry continues to count on Vermeer.

The singular power of Vermeer trenchers

Under most ground conditions, a single Vermeer trencher can perform the work of several excavators. Operators can trench fast and efficiently with minimized chain wear due to a low-speed, high-torque, splined headshaft motor and variable chain speed.

In soil conditions where excavators may dig inches per minute, a Vermeer trencher can cut several feet per minute. With a clean, level bottom, the trench needs little bedding. The trench will have straight walls (vertical walls when using a trencher equipped with Auto Level), thus removing only the amount of spoil needed. Unlike excavators, Vermeer trenchers cut their own spoils, providing their own backfill. The result? A clean, custom trench ready for installation with built-in backfill. Quickly and all in one shot.

The trencher advantage

- One trencher can do the work of multiple excavators.
- Trenchers minimize the amount of labor, fuel and materials needed on a jobsite.
- Depending on requirements, the spoil can be used as backfill without crushing.
- The ditch bottom is clean.
- The ditch walls are cleaner and straighter compared to those created with an excavator.
- You can maximize your job performance and efficiency.

ROCK TRENCHING IN THE DESERT

The rippling current of the 2008 U.S. housing market collapse struck more than just new home construction in cities like Phoenix, Arizona. It halted planned infrastructure improvements, and the combination proved fatal to many companies whose livelihood depended on the two sectors.

More than a decade later, the Phoenix-area community of Goodyear is booming again. Contractors whose businesses survived the recession are now facing a different challenge: the wall of work that is leaving many scrambling to keep up.

Sellers & Sons Inc. was one of the general contractors that made it through those challenging years, though it took consolidation and restructuring to make it work for the family business with locations in Tucson and Phoenix, Arizona.

“Before the housing bubble, Sellers & Sons was primarily known as a local family-owned business that specialized in installing outdoor sports lighting and building HUD housing for American Indian tribes in Arizona,” said Spencer Sellers, who was working in underground utility line installation prior to joining Sellers & Sons. Today, the company that once just handled construction has diversified into underground utility work.

Estrella water project

That diversification sent Sellers & Sons in new directions, including the installation of water lines for Goodyear’s largest new planned community, Estrella. At just over 20,000 ac (80 km²), Estrella is located in the foothills of the Sierra Estrella Mountains in the Sonoran Desert Valley. The affluent community currently has just over 14,000 residents but is forecasted to grow significantly in the coming years.

To prepare for that growth, Sellers & Sons is installing 3,900 ft (1,188 m) of 16-in (40.6-cm) diameter ductile iron water pipe alongside the major thoroughfare Estrella Parkway, which adjoins areas where residential subdivisions will be built. The new line is being installed at depths of up to 16 ft (4.9 m) deep. The crew is also running a shallower trench parallel to the water line ditch for a future electrical line.

Planning for rock

Projects like the Estrella Parkway come with unique challenges, namely frequent encounters with underground rock formations. It’s so common in this area that underground contractors often include “rock clauses” in contracts that cover potential additional labor costs when facing unexpected granite and other rock formations while digging.

“We’ve done a lot of work in the area, usually with excavators, and knew we would be digging in a mixture of granite and dense blue granite,” Sellers said. “In those conditions, a person’s lucky if he or she can dig 200 ft (61 m) in two weeks with excavators and hammers. It’s a real challenge and hard on equipment.”

Sellers & Sons site foreman Baron Holly recognized this challenge and the limitations it would place on his crew’s work and equipment. His first step toward a solution was to call Vermeer Sales Southwest Inc., now Vermeer Mountain West, to inquire about a trencher.

“We’ve rented trenchers from this Vermeer dealer in the past, but this project was going to be a lot more challenging because it was entirely in rock,” Holly said. “The team at Vermeer Sales Southwest did more than rent a trencher to us; they pulled samples of the rock we would be digging in, sent them off to be analyzed, and then came back with an equipment recommendation to help maximize productivity.”

Collaboration with testing

Sellers & Sons’ Vermeer dealer sales representative, Justin Siler, sent the core samples from the Arizona jobsite to the Vermeer Rock Lab in Pella, Iowa, for extensive testing. Afterward, Siler supplied Sellers and Holly with a rock lab report that provided data on the rock’s hardness, abrasiveness and how it may respond when workers and machines encountered it.

“With that information, we were able to help them calculate estimated production rates and operating costs,” Siler said. “From there, we recommended the Vermeer T1155 Commander® 3 trencher with Kennametal RockRazor™ TS19C X cutting teeth to perform in the rocky ground conditions.”

Impressive results

Sellers & Sons quickly saw results. Using the recommended equipment, they were able to trench between 600 ft and 800 ft (182.9 m and 243.8 m) per day. With a 540 hp (403 kW) engine, the Vermeer trencher worked through both granite and blue granite formations at an aggressive pace.

Alongside the 16-ft (4.9-m) deep, 34-in (86.3-cm) wide trench, the crew dug an offset trench for the electrical conduit. Initially, Sellers & Sons thought they would have to change out the boom for the shallow area, but rock toward the surface was soft enough they could still productively trench at those depths with the longer boom.

“We wanted the boom on the trencher between 45 degrees and 90 degrees when trenching in hard rock like this,” explained Sellers. “If we tried to run too flat then the boom could have bounced a bit. However, since the top 3 ft to 5 ft (.9 m to 1.5 m) were softer, we didn’t have to change the boom out.”

Sellers & Sons completed trenching on the Goodyear, Arizona, project in just over two weeks — a time frame that impressed the customer, crew and other contractors working nearby.

“A few years ago, we did a project in the area similar to this one, but we weren’t dealing with as much rock,” Sellers said. “It took us two weeks to get those 200 ft (61 m) with an excavator and hammer; the same amount of time we spent trenching on the whole Estrella job!”

Growing demand

One of the people to notice how quickly the Sellers & Sons crew wrapped up the Estrella Parkway job was a contractor and friend of Sellers and Holly dealing with his own rocky nightmare on a nearby project.

“Our friend’s crew was working right next door at the Rosewood Golf Villas community,” mentioned Sellers. “In the time it took to complete our project, they were only able to dig around 200 ft (61 m) with an excavator. They weren’t happy, and the customer was getting concerned about the growing costs involved with installing this new waterline.”

Their friend asked if Sellers and Holly could bring the Vermeer T1155III trencher over to their job when they were done. This job had similar ground conditions, trench depths and the need for a parallel trench. The only difference was the size of the waterline, as it was smaller.

“We are just starting this job, but we expect similar productivity,” said Sellers. “The Vermeer trencher and our crew will be able to efficiently complete the project, and that’s a big deal for everyone.”

Looking ahead, Sellers said he sees the T1155III trencher as a means through which his company can reach a new area of work that it couldn’t before. And not only is the machine opening new doors, it’s doing so efficiently.

“We have two more jobs in the works once we’re done with this. We rented the T1155III trencher for one job, and now I’m not sure how long we will continue to rent it,” Sellers said. “I think the whole area is growing and the area developers want to make sure they have the necessary infrastructure in place to keep up.”

THE RIGHT TRENCHER **FOR ANY INDUSTRY**

Vermeer trenchers can handle a wide range of trenching jobs, including pipeline distribution, water, sewer, gas, power and underdrain installations, and other heavy-duty trenching tasks. Your Vermeer dealer can help you find the best fit for your operation.

Pipeline installation

In natural gas and oil pipeline installation, the trench must be deep enough to accommodate the pipeline, plus the required distance from the pipeline to the ground surface. Certain areas, such as waterways and road crossings, require a greater minimum depth to meet the regulations for natural gas pipelines.

Electric transmission lines

Most commonly, trenches for electric transmission lines are at least 6 ft to 8 ft (1.8 m to 2.4 m) deep to keep cables below the frost line. The trench dimensions will be greater in places where vaults are located. The dimensions of the trench might need to be deeper and wider to avoid underground obstacles. When trenches are deeper than anticipated, the width of the trench must be widened for purposes of stability.

Water and sewer installation

When a new urban subdivision is in developmental stages, there are many pieces of infrastructure that need to be installed. Vermeer trenchers can play a role in opening up the ditch for the water and sewer installation, especially when the ground conditions are rocky.

Water management

Controlling water flow after heavy rainfall is important in many situations, like farm tiling and highway drainage. There are many benefits for tiling a farm field, such as soil erosion prevention, better root systems for the crops, reduced yield variation and more. In the highway sector, maintaining a firm subbase to the roadways is critical to keeping the traveled surface of the road in good shape over its designed life, and managing the drainage runoff from the roadway is a critical piece to keeping the subbase at a uniform compaction for this to work as designed. Vermeer trenchers are used in many places, opening the ditch and placing corrugated tile that is used to create a flow path for the water to get it to a place where it can be managed.

Learn how ground conditions impact which trencher model is right for your job.

TRENCHER **OVERVIEW**

EQUIPMENT MODEL	GROSS HORSEPOWER	WIDTH RANGES
T1255III	600 hp (447 kW)	134 in (340.4 cm)
T1155III	540 hp (403 kW)	118 in-120 in (292.1 cm-304.8 cm)
T1055III	415 hp (310 kW)	116 in-122 in (294.6 cm-309.9 cm)
T955III	415 hp (310 kW)	114 in (289.6 cm)
T755III	275 hp (205 kW)	98 in-102 in (249.4 cm-259.1 cm)
T655III	250 hp (186 kW)	97 in (246.4 cm)
T555III	185 hp (138 kW)	97 in-102 in (246.4 cm-259.1 cm)

VERMEER ATTACHMENTS

Rockwheel: Cut through rock, concrete and other tough surfaces with a Vermeer rockwheel. Designed to take on challenging ground conditions, these rockwheels will give you clean, straight-sided trenches for a variety of concrete-cutting projects, including patch and joint placement on interstates, streets and highways, or on decorative stones.

Bucket wheel: Trenching in soft soils can be tricky. The bucket wheel is designed to maximize productivity in soft soils. Instead of the typical chain configuration, which positions the carbide trencher teeth in a specific formation or pattern, the wheel features a series of buckets that rotate in a circular motion, helping move more dirt from the trench.

Loading conveyer: The loading conveyor is used when you are in a narrow right of way and don't have room to pile spoil and still drive next to the trench. Also other situations require that the cut material is hauled off-site so you can directly load to the truck.

Tile layer: Optimize water management by installing field drainage tile with the tile layer attachment (available on T555III and T655III only).

TEC® Plus computer-aided control system with SmartTEC

All Vermeer trenchers come equipped with SmartTEC performance software, a control platform that helps optimize productivity according to real-time machine control prompts. The platform is convenient to learn and operate with user-friendly screens showing operators what adjustments can be made to help increase production and optimize performance as ground conditions change.

The TEC Plus system and SmartTEC performance screens use CAN bus technology to continuously monitor machine performance data — providing proactive machine maintenance and operator performance analysis.

TRENCHER **COMMON FEATURES**

1) Trencher cleaner arch
2) Teeth
3) Boom top rollers
4) Bridge
5) Boomhead
6) Cab
7) Cross conveyor
8) Tracks
9) Dirt drags
10) Trencher boom
11) End idler
12) Trench cleaner shoe

THE VERMEER FAMILY **OF TRENCHERS**

Time- and contractor-tested Vermeer trenchers have cut through some of the world's toughest landscapes. Built hard-nosed to power through soft soils to abrasive rock, the Vermeer family of trenchers has been an asset on the pipeline for 50 years. Whether you're cutting through hard rock or installing a cross-country pipeline, Vermeer has a trenching solution to meet your needs.

FEATURES AND BENEFITS

Common trencher features

- Dig tough trenches efficiently with minimized wear (including in solid rock) with low-speed, high-torque, splined headshaft motors. Due to the high torque rise engine, when you encounter tough trench-digging conditions, the engine speed drops, increasing the torque for more power to pull through.
- Find maximum power and high torque with a hydrostatic transmission backed by a 1-year/1,000-hour extended care package.
- Help extend boom life with features such as high-alloy bottom trencher boom wear strips and optional boom-top rollers.
- Get a clear view of the boom, trench and conveyor with an elevating cab. (Not available on fixed cab models: T555III and T655III.)
- Match jobsite requirements with a variety of boom lengths to choose from.
- Communicate with multiple machine control modules for real-time performance data and advanced troubleshooting capabilities with the TEC Plus system on all Vermeer trenchers.
- Minimize turf damage and help machine stability with self-leveling tracks that distribute weight evenly. On select models, an oscillating track frame allows the trencher to follow the ground's contour for a vertical trench on slopes up to 10 degrees.
- Get full operation functionality from an optional wireless remote control designed for conditions such as working near a high wall or unloading/loading onto a trailer.
- Help decrease trencher teeth inspection and replacement maintenance time through a remote attachment control that can start or stop the engine, raise or lower the trencher boom and rotate chain at a slow speed.
- Trench up against guardrails, buildings, walls and other obstacles with offset trencher models.

Optional features

- Optional drags are available on all models and are used to clean the surface of the trench and pull spoil into the ditch.
- A split cab design reduces the need for over-width trucking permits. The cab swings open and the cab locking bar is then bolted in to secure the cab.
- Standard cutter setups provide for a wide range of cutting conditions along with custom design options to meet customer needs.

The Vermeer advantage

- Vermeer Vantage Track extended care service program offers an optional 3-year/3,000-hour or 5-year/5,000 hour heavy equipment extended care on the components of the closed-loop hydrostatic system.
- Vermeer dealers offer comprehensive service and genuine Vermeer replacement parts.
- The Vermeer Confidence Plus® asset protection program gives your operation a major advantage — providing the ongoing service you need to help protect the productivity and value of your Vermeer equipment.

T1255 COMMANDER® 3 TRENCHER

The heavy-duty T1255III from Vermeer provides the trench-digging power needed to cut through rock for large-diameter applications, as well as major pipeline projects with high-volume spoil removal through an extra-wide 36-in (91.4-cm) dirt conveyor opening.

Trencher | Terrain Leveler® surface excavation machine (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 12.2 ft (3.7 m)

Max length: 53.8 ft (16.4 m)

Weight range: 150,000 lb-205,000 lb (68,038.9 kg-92,986.4 kg)

Width range: 11.2 ft (3.4 m)

Engine make and model: Caterpillar C18 ACERT

Engine horsepower: 600 hp (447 kW)

T1155 COMMANDER® 3 TRENCHER

The T1155III is the ideal trenching machine to penetrate rock, combining electronics, versatility, a wide boom attachment and 540 hp (403 kW) of muscle.

Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 12.2 ft (3.7 m)

Max length: 45.3 ft (13.8 m)

Weight range: 120,000 lb-170,000 lb (54,431.1 kg-77,110.7 kg)

Width ranges: 9.8 ft-10 ft (2.9 m-3 m)

Engine make and model: Caterpillar C15 ACERT

Engine horsepower: 540 hp (403 kW)

T1055 COMMANDER® 3 TRENCHER

For pipeline and utility installation projects requiring high horsepower and deep digging depths, Vermeer offers the T1055III.

Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 11.3 ft (3.4 m)

Max length: 41 ft (12.5 m)

Weight range: 87,000 lb-124,000 lb (39,463.5 kg-56,245.5 kg)

Width ranges: 9.7 ft-10.2 ft (3 m-3.1 m)

Engine make and model: Caterpillar C13 ACERT

Engine horsepower: 415 hp (310 kW)

T955 COMMANDER® 3 TRENCHER

Cut through tough trench-digging conditions on pipeline and utility installation projects with the Vermeer T955III, which features an extra wide 30-in (76.2-cm) dirt conveyor opening for high-volume spoil removal.

Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 11.1 ft (3.4 m)

Max length: 39.7 ft (12.1 m)

Weight range: 78,000 lb-109,000 lb (35,380.2 kg-49,441.6 kg)

Width range: 9.5 ft (2.9 m)

Engine make and model: Caterpillar C13 ACERT

Engine horsepower: 415 hp (310 kW)

T755 COMMANDER® 3 TRENCHER

When you're digging in tough trenching conditions, the T755III will stand firm with up to 60,000 lb (27,215.5 kg) of tractive force on the ground.

Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 10 ft (3 m)

Max length: 33.6 ft (10.2 m)

Weight range: 49,000 lb-75,000 lb (22,226 kg-34,019.4 kg)

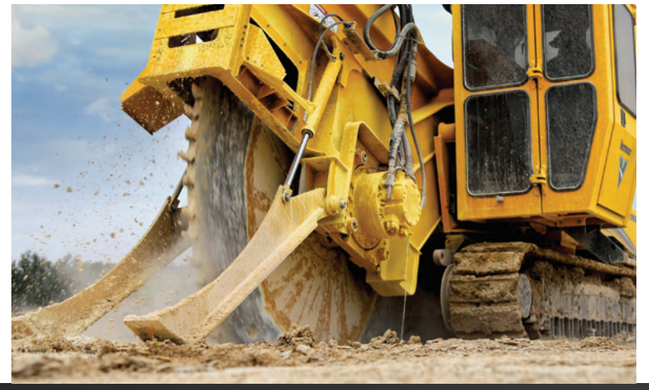
Width ranges: 8.2 ft-8.5 ft (2.5 m-2.6 m)

Engine make and model: Option one: Caterpillar C9 ACERT Tier 3 Option two: John Deere 6090HFC09 Tier 4 Final

Engine horsepower: 275 hp (205 kW)

T655 COMMANDER® 3 TRENCHER

Equip the T655III with optional attachments to tackle a myriad of trenching jobs. The bucket wheel attachment is designed for the installation of small-diameter cross-country pipelines and maximizes productivity in soft soils. The rockwheel attachment is designed for highway lighting, fiber installation and rock applications.



Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 9.9 ft (3 m)

Max length: 30.1 ft (9.2 m)

Weight range: 40,000 lb-59,500 lb (18,143.7 kg-26,988.7 kg)

Width range: 8.1 ft (2.5 m)

Engine make and model: John Deere 6090HF

Engine horsepower: 250 hp (186 kW)

T555 COMMANDER® 3 TRENCHER

Equipped for tough trenching jobs around the world, the T555III is available with a 4-in, 5-in, 6-in or 8-in (1.2-m, 1.5-m, 1.8-m or 2.4-m) trencher boom capable of trenching widths up to 24 in (61 cm). An optional hydrostatic rockwheel attachment cuts depths up to 36 in (91.4 cm) in some of the toughest rock conditions.

Trencher | Terrain Leveler® (SEM) | Rockwheel | Bucket wheel

PRODUCT SPECIFICATIONS

Height range: 9.8 ft (3 m)

Max length: 25 ft (7.6 m)

Weight range: 28,000 lb-36,500 lb (12,700.6 kg-16,329.3 kg)

Width ranges: 8.1 ft-8.5 ft (2.5 m-2.6 m)

Engine make and model: John Deere 6068H

Engine horsepower: 185 hp (138 kW)

A ROCK LAB **BUILT TO TEST THE LIMITS**

The biggest question about trenchers: "How will it perform in my conditions?"

Environmental conditions can lead to vast differences between, and within, rock types. This ultimately impacts the performance of a trencher and the resulting ditch. Therefore, it's important to know the compressive strength, or hardness, of the rock, as well as its density, abrasivity and tensile strength to help determine the appropriate machine for the job.

Back in 2000, Vermeer made a significant investment to enhance its rock-testing capabilities by building a cutting-edge rock test laboratory following international and domestic geological society standards.

*Calculator costs and operating expenses are based on estimates considering customer-provided data and assuming proper use, maintenance and operation. Actual operating costs and return on investment will vary based on conditions, price fluctuations, polymer use and other external factors. This is a tool for estimating only and is not a guarantee of actual results.

To date, our rock lab has tested thousands of rock samples from across the world. While we sample and test rock, we also go out into the field and estimate how our machines will perform in that rock.

The following tests are performed at the Vermeer Rock Lab:

- Unconfined compressive strength (UCS)
- Cerchar abrasivity index
- Indirect tension
- Vermeer energy index
- Estimated maintenance costs*
- Estimated operating costs*
- Estimated cost per ton or cost per volume*

MANAGE TRENCHER PERFORMANCE **EFFICIENTLY**

Are you limiting the productivity of your equipment without even realizing it? Vermeer Fleet and Vermeer Fleet+Edge help increase machine productivity by managing and analyzing operational data captured in near real time. Operations and fleet managers can review machine information at any point in time during or after a trenching operation to help improve the performance of the equipment and crews.

Vermeer Fleet

Vermeer Fleet keeps you in the know about your machines. This user-friendly online productivity and jobsite management tool lets you remotely view key telematics, monitor productivity and help optimize your machine and operator performance on your Vermeer Fleet-enabled equipment. Conveniently monitor key telematics like machine idle times and estimated fuel consumption to help manage operating costs.

Vermeer Fleet+Edge

Everything offered in Vermeer Fleet — plus even more. Vermeer Fleet+Edge includes advanced productivity tools such as SmartTEC to monitor actionable machine information like productivity tracking and performance measurements for operations and fleet managers.

- Machine usage
- Percent engine load*
- Ground drive speed*
- Machine totals
- Neglected prompts*
- Attachment pressure*
- Attachment knob*
- Load knob*
- Propel command*
- Ground drive switch*

SERVICE AND SUPPORT

You deserve an equipment partner who understands the stresses and risks inherent to the underground frontier, while offering the expertise and support necessary to keep you running — an ally like Vermeer.

Vermeer has more than 50 years of experience in the trenching business, and we're committed to offering our partners in progress the solutions that help move your business and the world forward.

With a global presence from local dealers, underground trailblazers can rest assured Vermeer has an expert nearby, ready to support a variety of projects.

WARRANTY AND EXTENDED COVERAGE

Vermeer stands behind its products to help give customers peace of mind. Vermeer trenchers feature a 1-year/1,000-hour standard limited warranty and offer optional extended care coverage for either 3 years/3,000 hours or 5 years/5,000 hours on select components.

Calculator costs and operating expenses are based on estimates considering customer-provided data and assuming proper use, maintenance and operation. Actual operating costs and return on investment will vary based on conditions, price fluctuations, polymer use and other external factors. This is a tool for estimating only and is not a guarantee of actual results.
