PROTOTYPE SHOWN

# 2021 BALE WRAPPER

# BW5500 BALE WRAPPER

The BW5500 bale wrapper provides fast wrapping times, operational control and airtight wrapping for optimized nutrient preservation.

**1** The digital controller and precision counter give operators the ability to set a consistent number of wraps on each bale. The controller adjusts the right number of wraps, which optimizes wrap use. A soft-start feature progressively starts the movement of the hoop, which helps limit the chance of plastic film tearing on startup.

**2** Three 30-in (76.2-cm) pre-stretchers wrap quickly, increasing the amount of time before a plastic film refill is needed compared to machines with only two pre-stretchers. The standard hoop can handle 6-ft (1.8-m) bales, providing the flexibility to wrap cornstalks or large dry hay bales in addition to wet hay.

**3** An optional laser guidance system helps keep rows straight by automatically following semi-permanent fence rows, structures, existing rows of bales or dense crops. Spacing adjustments can be made on the control system.

**4** Optional spring-assisted final bale push off smoothly pushes the final bale off the wrapper.

**5** The hitch is located on the loading side of the machine for ease of access to the tongue. This allows operators to pull the machine away from the line of bales without requiring a power drive on the bale wrapper.
