Vermeer® BPX9000 Bale Processor

:60 Second Radio – BPX9000 Bale Processor

Before setting out to design the new BPX9000 bale processor, Vermeer listened closely to what customers really wanted and needed in a bale processor.

They kept hearing the same things.

Simplicity. Durability. And versatility.

So that's the bale processor Vermeer built.

The BPX9000 bale processor not only helps maximize productivity, but it's also easy to operate, whether you're distributing consistent, uniform ribbons on the range, hitting tight spots along the bunk line or simply laying down clean, consistent blankets of bedding for the winter.

Plus, it requires less maintenance time, with features such as the self-cleaning rotor option and split-shaft bed design.

And an optional square bale kit gives this round bale processor the ability to also process large square bales evenly and consistently.

Simple. Durable. Versatile. The BPX9000 is what operators want and need it to be.

Stop by _____ in _____ today and see the all-new BPX9000. It's the bale processor you asked for.
